

# What is Github/Git

- GitHub is a repository hosting service.
  - Web-based interface.
- Git is a command line tool.
  - Version control system
  - Each directory is a repository.

# Why Use it?

- Create repositories for:
  - Source code
  - Computing Workflows
- Organize
  - Collaborations
  - Easy to follow workflows (e.g. Markdown)
- Version Control
  - Record changes to a file over time so that you can recall previous versions

# What you'll learn

- How to fork the edamame 2016 repository.
- Make edits to that repository on your local computer and then make those changes on your remote github account.
